

# TAMIR EILON

As a DevOps engineer with a holistic perspective, I am deeply committed to collaborative teamwork and possess a strong foundation in the principles of DevOps. With a keen sense of organization and resourcefulness, I thrive on creating efficient and automated solutions within the realm of software development.

## Experience

---

### System Administrator

IDF - "Efraim" Territorial Brigade, 2020-2022

- Assisted as a certified network administrator and Helpdesk assistant, while operating with classified computing environments and advanced systems.
- Successfully led a team of 4-5 personnel as a system administrator, coordinating tasks, setting objectives, and ensuring mission-critical systems were operational.

### System Engineer

IDF - Classified Unit, 2022-2023

- Created and maintained reports, and dashboards to monitor performance and track anomalies in servers and cloud services using "Splunk", as well as "SQL", "Linux" and others.
- Automated deployments of services in various classified Linux & Windows servers, using Python & Bash scripts.
- Configure and manage infrastructures using "Ansible", while automating them simultaneously.

## Education

---

### System Administrator Course

IDF's "Cyber & Network" teaching facility, 2021

- Acquired expertise in configuring and managing intricate computer systems, as well as servers and other classified systems.
- Implemented and maintained security protocols to safeguard critical data and infrastructure.

### DevOps Course

Sela College, 2023

- Implemented various CI/CD pipelines using automation tools such as "Jenkins" and "GitHub Actions".
- Demonstrated proficiency in cloud infrastructure management and utilization, with a focus on "AWS" and "GCP".
- Acquired hands-on experience in fostering a DevOps culture that emphasizes automation, efficiency, and continuous improvement
